## metal and wood add-on storage basics

Ledger Plus Metal Add-On Storage provides enclosed storage that is mounted on top of Ledger Cabinets. It provides open storage that is mounted to the top of Ledger one-high cabinets, worksurfaces or between worksurfaces and metal storage.

### Metal Add-On

### Wood Add-On

### metal add-on storage

#### Add-On Storage Cabinet (PLACM)

Height: 18", 22", 30"

Depth: 18" & 20"

Width: 24", 30", 36", 42"

#### SA2 shown

- One interior shelf is included with each Add-On Cabinet except for 18" high and is adjustable in 1.6" increments
- **Additional Shelves (SA1)** and **Slotted Shelves (SA2)** can be specified. The Slotted Shelf is pierced with openings that accept Divider Plates (LFA10, 24, 32)

When positioned next to each other, the wood add-on top thickness and metal add-on top thickness are not the same due to variance in material thickness so they will not align.

# planning with storage tops

The following should be considered when planning with Ledger Plus Storage tops.

Ledger Plus storage tops are available in preconfigured sizes to accommodate common configurations. The following chart outlines the available standard configurations.

Application	Configuration	Depth A	Depth B	Width A	Width B	Depth of Top	Width of Top
(S) Single-Sided	(A) 2 units side by side	18, 20	n/a	24, 30, 36, 42	n/a	18, 20	48, 60, 72, 84

	(J) 2 back to back units with 1 end unit		18	18 20	24, 30, 36, 42 24, 30, 36, 42	36	36
		(H) cluster of 4 back to back units with 1 end unit	18	18 20	24, 30, 36 24, 30, 38	36	36

Please note that top sizes are nominal, the actual size is intended to slightly overlap the filing. It is recommended that only one top be used on each filing configuration. For non standard configurations, please contact the *Teknion Specials department* to request a single top.

When planning with 42" wide storage ends on both sides it is possible to create an internal gap in the center to allow for power access.

## worksurface basics

Available in Foundation, Mica and Accent finish.

- Only available for surfaces over 36" deep
- Cluster Leveling range of +1

# planning with worksurfaces

The following should be considered when planning with Worksurfaces.

### Pedestal Legs

- If the unsupported span to the center of the pedestal leg is  $\geq 54$ " and the depth of the surface is  $\leq 36$ ", then one reinforcement channel is required and must be mounted in the center of the surface
- The channel should be ordered at least 6" shorter than the unsupported span
- If the unsupported span to the center of the pedestal leg is  $\geq 48$ " and the depth of the surface is  $\geq 40$ ", then two reinforcement channels are required and must be mounted on either side of the pedestal leg
- The channel should be ordered the same length as the unsupported span to The Center of The Pedestal Leg

### District and Loop Legs

- If the unsupported span to the end of the worksurface is between 52" and 70" and the depth is  $\leq 36$ ", then one reinforcement channel is required and must be mounted in the center of the surface
- The channel should be ordered no more than 6" shorter than the unsupported span
- If the unsupported span to the end of the worksurface is  $\geq 70$ " and the depth is between 30" and 36", then two reinforcement channels are required and must be mounted equally from both sides
- The channel should be ordered no more than 6" shorter than the unsupported span
- If the unsupported span to the end of the worksurface is  $\geq 52$ " and the depth is more than 40" then two reinforcement channels are required and must be mounted on equally from both sides
- The channel should be ordered no more than 6" shorter than the unsupported span
