

teknion boulevard

teknion

Boulevard is an affordable, versatile panel system that is easy to specify, install and reconfigure. Developed with highly functional individual components, Boulevard responds to growing organizations looking for a simple, yet effective, product offering at a modest budget.

Key Attributes

- Panel Capabilities—standard features offer high performance
- Product Integration—combining B1 and B3 panels helps reduce costs
- Value Engineered—inherent design features offer exceptional investment value
- Components—complementary collection of products creates varied applications
- Environmental Considerations—high use of recycled content in panels promotes environmental responsibility

two panel types: tailored to your applications

B1 panels – beltline power and data access behind door or face-mounted (shown), clean floor detail, monolithic or segmented, acoustic and tackable fabric, laminate or whiteboard

fascia, air-flow bottom (shown), light-weight aluminum frames and connectors, stackable over-panels up to the ceiling and over doors (stackers in; glass, fabric, whiteboard, laminate).

B3 panels – frame and tile system above worksurface, monolithic or segmented, baseline power and data and/or face-mounted at beltline, snap-in tiles include; tackable fabric, laminate, whiteboard, accessory rails,

pass-thru trim, face-mounted power/data. Light-weight aluminum frames and connectors, stackable over-panels up to the ceiling, top trough for lay-in data, fast install with limited parts and pieces.

flexible workstation environments:
fixed or height-adjustable desks

B1 – height adjustable desks encourage movement and workplace wellness. Glass over-panels share outside light and connection while also defining

a sense of space and place. Boulevard offers a wide variety of full-to-floor (shown) and elevated storage.

heads-down work or
teaming areas: create
“we” and “me” spaces

Healthy workspaces offer a variety of postures and places to move about. Boulevard's B3 panels feature varying heights to provide different levels of privacy and interaction. Boulevard elevated storage options lighten up the visual impact of the workplace. Boulevard's stackable panels allow for the flexibility to build-up when additional privacy is needed or unstack when collaboration or interaction is required.

graphic panel program: customize
company or area brand identity

Brand departments or functions within your workspace with graphics and colors. B1 and B3 (shown) panels can be reupholstered onsite (B3 without disassembly)—change the graphics to reflect seasons, mergers, new logos or products. B3 offers three glass topper options: embedded in top of B3 panel (above); glass tile in frame (left); and frameless glass blade inserted into panel mounted “hockey puck” brackets (not shown)—most affordable option.

Paint finishes: Tungsten (TUN); Fabric: Cyclone Stainless (M40)

enclaves/personal spaces:
private escapes from the open plan areas

B3 (above) can be stacked to achieve varying levels of privacy and connection. B1 (left) and B3 offer a variety of door options, including the sliding “ribbed” acrylic door. Provide spaces for open plan residents to “retreat” for private and personal conversations or for intimate work group settings.

private offices: fast ... flexible ... affordable

Both B1 (above) and B3 (right) panel stackability easily adapt to simulate low cost/fast install/easily moveable walls for private space applications. Panels attach

to walls, but stack to only 1" from the ceiling since the top stackers are able to be ordered by-the-inch to provide a minimal shadow line at the ceiling.

meeting/conference spaces:
medium to larger conference settings

B1 panels are especially adaptable for full-height possibilities—available to a full 82" door height, offers tackable fabric/ glazed/laminate/ whiteboard panel elevations, features the very rigid industry unique “knuckle-lock” for panel-to-panel rigidity, offers a “clean look” base at the floor line, can be specified with no beltline raceway for full monolithic aesthetic (and saves money), can be installed at 82"H with over-panels installed last—it is particularly suited for the full-height application.

Alternate views show the use of the unique curved panel in glazed acrylic (also available in fabric, laminate or whiteboard elevation), and the collaboration public area around back.

teknion

on front cover

Boulevard B3 panels shown in Tungsten (TUN) paint and B1 panels in Designer White (DWT) paint, with Cyclone Stainless (IM40) and “graphics program” fabric throughout. Storage and tables shown in Designer White (DWT) laminate with Tungsten (TUN) legs. Darker toned wood-grain laminate tops and laminate storage in Absolute Acajou (ACJLP). Around task and side-seating in Ample Sunburst (4034-03; T222) fabric, Gris frames (9F), Black Mesh (A127) and polished chrome bases.
