district inset glass

Teknion has enhanced the District offering with a new Inset Glass option. Inset Glass comprises a glass blade embedded in the panel, providing a clean design aesthetic and access to natural light.

Inset Glass is achieved with a newly designed panel, top trim and glass blade. New panels are available in most standard sizes and accept existing fascias. They also accommodate traditional top trim. The Inset Glass blade is available in two versions – panel and bridged. The bridged version is designed to cover a 3-inch panel connection.

district stretch solid fascia

District also now features a Stretch Solid Fascia option that creates a seamless linear aesthetic by extending one or both sides in an in-line application. Stretch Solid Fascia eliminates the need for visible vertical trim on a 3-way connection, providing a continuous solid finish on corridor applications.

complements electrical accessories

The Power Station and Power Cube have been added to the Complements Electrical Accessories offering.

The Power Station has been a high-volume custom product that is now standard. With its clean lines, USB integration and ease of use, the Power Station is available in two Power/USB/Data port configurations – desk edge and under-desk mounting. Choice of finishes includes Very White and Gris.

As with the Power Station, strong demand for the Power Cube in the Thesis Learning & Library tables offering line had led to its broader availability in Complements. The Complements Power Cube is available in three configurations of Power/Data/USB and two methods of mounting – desk edge or grommet kit mounting. The grommet kit includes mounts that fit Teknion's common 2.75-inch (7 cm) round cutout and the diamond cutout found in Expansion, Height-Adjustable Bench and upStage.

Choice of finishes includes Very White and Gris.

01 The Inset Glass option comprises a glass blade embedded in the panel with a minimal amount of exposed trim, providing an updated, seamless appearance.

02 With its clean lines, USB integration and ease of use, the Power Station is available in different configurations, including Power/USB/Data.

tekunion's community table

In today's human-centered workplace, a new trend is emerging. Large, shared community tables are appearing in office lobbies and reception areas, corporate cafes and open work areas.

Tekunion's community table is designed to be in tune with these human needs and modern workstyles. A model of simple, straightforward design, the table's substantial proportions make it a focal point for any space, an architectural anchor that invites interaction.

Tables are available in custom dimensions to meet clients' exact requirements, and are created at Tekunion's Solutions Woodwork facility with its signature high level of craftsmanship.

upStage y leg metal option

The upStage Y Leg is now offered in both wood and all metal construction options, providing more color choices. All metal color finishes – Foundation, Accent and Mica are available. Products with a rich material vocabulary provide the opportunity to be original and bold—to use color and texture to create a more varied, inspiring and personalized work environment.

02

01 Tekunion's community table in substantial scale becomes the focal point for human interaction in any space.

02 A new metal option on the upStage Y Leg offers more color choices on the lower support as it is available in all metal color finishes.

variable hybrED chair

The Variable HybrED chair is a mobile, compact, self-contained individual desk and chair. It is ideal for educational, corporate and residential environments, where it can be configured for focused, interactive and open space group activities. The chair is simple to operate and fully unhandled.

Variable HybrED features rugged construction, with a 300-lb. (136 kg) weight capacity and 24/7 warranty. The seat and worksurface swivel, enabling active participation in group discussions. The pivoting worksurface facilitates right- and left-hand use, and easy access/egress. A generous worksurface size

provides room for users to rest their arms on surface while in use.

The unique cantilevered frame and base maximize storage capacity and allow unobstructed access while in the seated position. If storage isn't a requisite, a model is available with five-star base and height adjustment.

Designed by Alessandro Piretti, the HybrED chair is visually integrated with the Variable family of multi-purpose chairs and includes the patented, integrated flex-back.

sabrina swivel stool

A new Swivel Stool joins the Sabrina family of seating. The design-savvy stool offers additional posture ranges and can be used for counter-height, traditional drafting and some bar-height surface applications.

The Sabrina Swivel Stool features a swivel mechanism with limited tilt plus an upscale, all-aluminum height-adjustable foot ring. It offers a seat-height adjustment range of 8 inches (20 cm) from 21 to 29 inches (52 to 73.5 cm).

side by side collection

Thinking differently about color, texture and pattern, the Side by Side Collection designed by Suzanne Tick for Teknion Textiles was created to inspire fresh and dynamic compositions. Color is more than just a hue. It responds to its surroundings and changes depending on context. Longer colorlines that offer multiple tonalities of each color encourage the exploration of analogous palettes. Subtle, smooth textures and lustrous surfaces contrast with strong textures and matte appearances. Contemporary graphics combine with traditional constructions. Large-scale patterns create fabrics that read differently depending on where they fall on furniture. These new Side by Side fabrics work with each other and with the rest of the Teknion Textiles line, expanding the palette of options that play well with each other.

*Please note, the Textiles launch date is February 23, 2016

angulo combines a traditional epingle pile construction with an unexpected large-scale graphic. Inspired by contemporary building facades, the strong geometric pattern stretches and compacts vertically, creating dramatic impact. An ombre stripe of tonal color runs in the opposite direction. The interaction of these two gradations creates movement and energy when applied to the curves of furniture.

percept builds on the success of the panel fabric Rationale. Suzanne Tick used the same yarn technology to create Percept, a heavier weight quality with an expanded texture and palette. Each yarn in this fabric is a combination of matte and luster finishes as well as light and dark tones. The thickness of the yarns allows the weave structure to create an elegant textural surface. Percept's long colorline was created to inspire the analogous color palettes of today's interiors.
