

teknion dna

teknion

Teknion dna™ is a collection of modular lounge seating and tables designed to expand the functional repertoire of lounge seating. In the contemporary office, the lounge often functions as a space for collaborative work and requires furniture that provides greater flexibility and easy access to power and communications. Teknion dna is designed to support collaborative work wherever it occurs throughout the office.

A modular design allows reconfiguration and reupholstery of the seat, bolster and table sides. Units align on all sides enabling components to be reconfigured by users as needs change. Additionally, power/data is routed through all unit bases, allowing a different access location from the power source and providing increased flexibility.

and Epiphany*

Teknion dna units feature a 13-inch module, allowing numerous and unique applications. Benches are available without bolsters to create an open and inviting collaborative setting. The collection comprises Freestanding Laptop Tables that integrate with seating to provide a casual worksurface for laptop use.

01 linear

Linear configurations divide the floor plate and offer multiple seating for side-to-side collaboration. Integrated tables offer technology support.

02 reception

More traditional configurations function as reception or casual meeting spaces by combining Teknion dna seating with coffee tables, which provide a surface for working and displaying materials.

03 open plan

Open plan clusters illustrate the benefits of movable bolsters. Back-to-back positioning defines individual territory or shared space, while integrated and free-standing tables support laptops and other work tools.

04 meeting

For applications that require a central focus — such as group presentations or media-based meetings — Teknion dna seats multiple participants while accommodating technology and laptop support.

05 low-profile touchdown

Low-profile clusters permit multi-directional access with benches connecting on all sides of the table.

06 multiple clusters

Repeating clusters provide 360-degree access to seating and interaction with central technology support.

01 bolster

Users can position the optional bolster center, left or right. The bolster also secures in place with a lock option, ideal for educational and public spaces.

02 laminate table

Laminate table surfaces are available in Compact Laminate with a distinct black edge. Compact Laminate offers the performance characteristics of high-pressure laminates with a thinner profile.

03 leather upholstery

Seating units upholstered in leather feature seam stitching applied to the top of the seat. All units feature a beveled edge on all sides of the seat surface.

04 veneer table

Veneer table surfaces are offered in Teknion's Flintwood and Natural Veneer stains, applied on a laminated Birch-ply substrate with an exposed straight edge.

05 laptop table

Laptop Tables provide a casual worksurface to accommodate the use of a laptop and mouse. Table tops flip and nest for space-saving storage. A handle permits easy mobility.

06 power module

A flush-fitting Data/Electrical Module is optional on Square and Side Tables. The retractable door allows outlets to be used with the door opened or closed.
