ZONES

Teknion continues to expand the Zones furniture collection with new products including Modular Seating, the Long Workshop Table, and Curved Ledge Tables. In addition, Quilted Fabric Buffers are now available on Enclosures and Screens.

zones modular seating

Zones Modular Seating is a lounge collection within the broader Zones offering. It includes fully upholstered straight or curved bench modules, plus accessories. Modular Seating is designed to work with and complement other Zones products – Casual Tables, Ledge Tables, Lighting, Sled Lounge Chairs and other chairs – thereby expanding the Zones collection's planning possibilities and applications in architectural spaces. Visually, the new seating continues the original Zones themes, with a strategic focus on creating a softer domestic mood with a rich and layered mix-and-match vocabulary.

Zones Modular Seating can be used by itself, or in conjunction with coordinating curved Ledge Tables, Long Work Tables and accessories, providing multiple configurations while addressing the needs of today's work behaviors and planning scenarios.

Modular seating is designed to simplify specification and offering, while maximizing planning capabilities. The units combine to create everything from straight runs to open-serpentine planning. The signature open-serpentine planning capability is enhanced by mixing high-, low- or backless units, and varying their direction, height and material finishes. Each unit connects different activities within a single footprint.

Power and data is optional, and simple to specify. Integrated tables and lighting can be included within the run, or on the ends. Various upholstery options can be specified in single or dual applications to suit required durability needs. Modular Seating's durable construction for commercial application exceeds the BIFMA weight capacity standard.

With Zones Modular Seating, the planning possibilities are endless.

zones quilted fabric buffers

Quilted Fabric Buffers present a more texturized alternative to existing Zones Flat Fabric Buffers. They can be used to partially cover the interior or exterior of Enclosures and Screens to enhance aesthetics and perceived acoustical properties. Available in select fabrics and colorways.

zones long workshop tables

The Long Workshop Table extends the existing Zones work table collection with a communal surface for impromptu collaboration and independent work. It provides a natural place for people to come together and work. The Long Workshop Table is available in standard lengths of 12, 16, 18 and 24 feet (3.7, 4.9, 5.5 and 7.3 m), and a depth of 48 inches (122 cm).

zones curved ledge tables

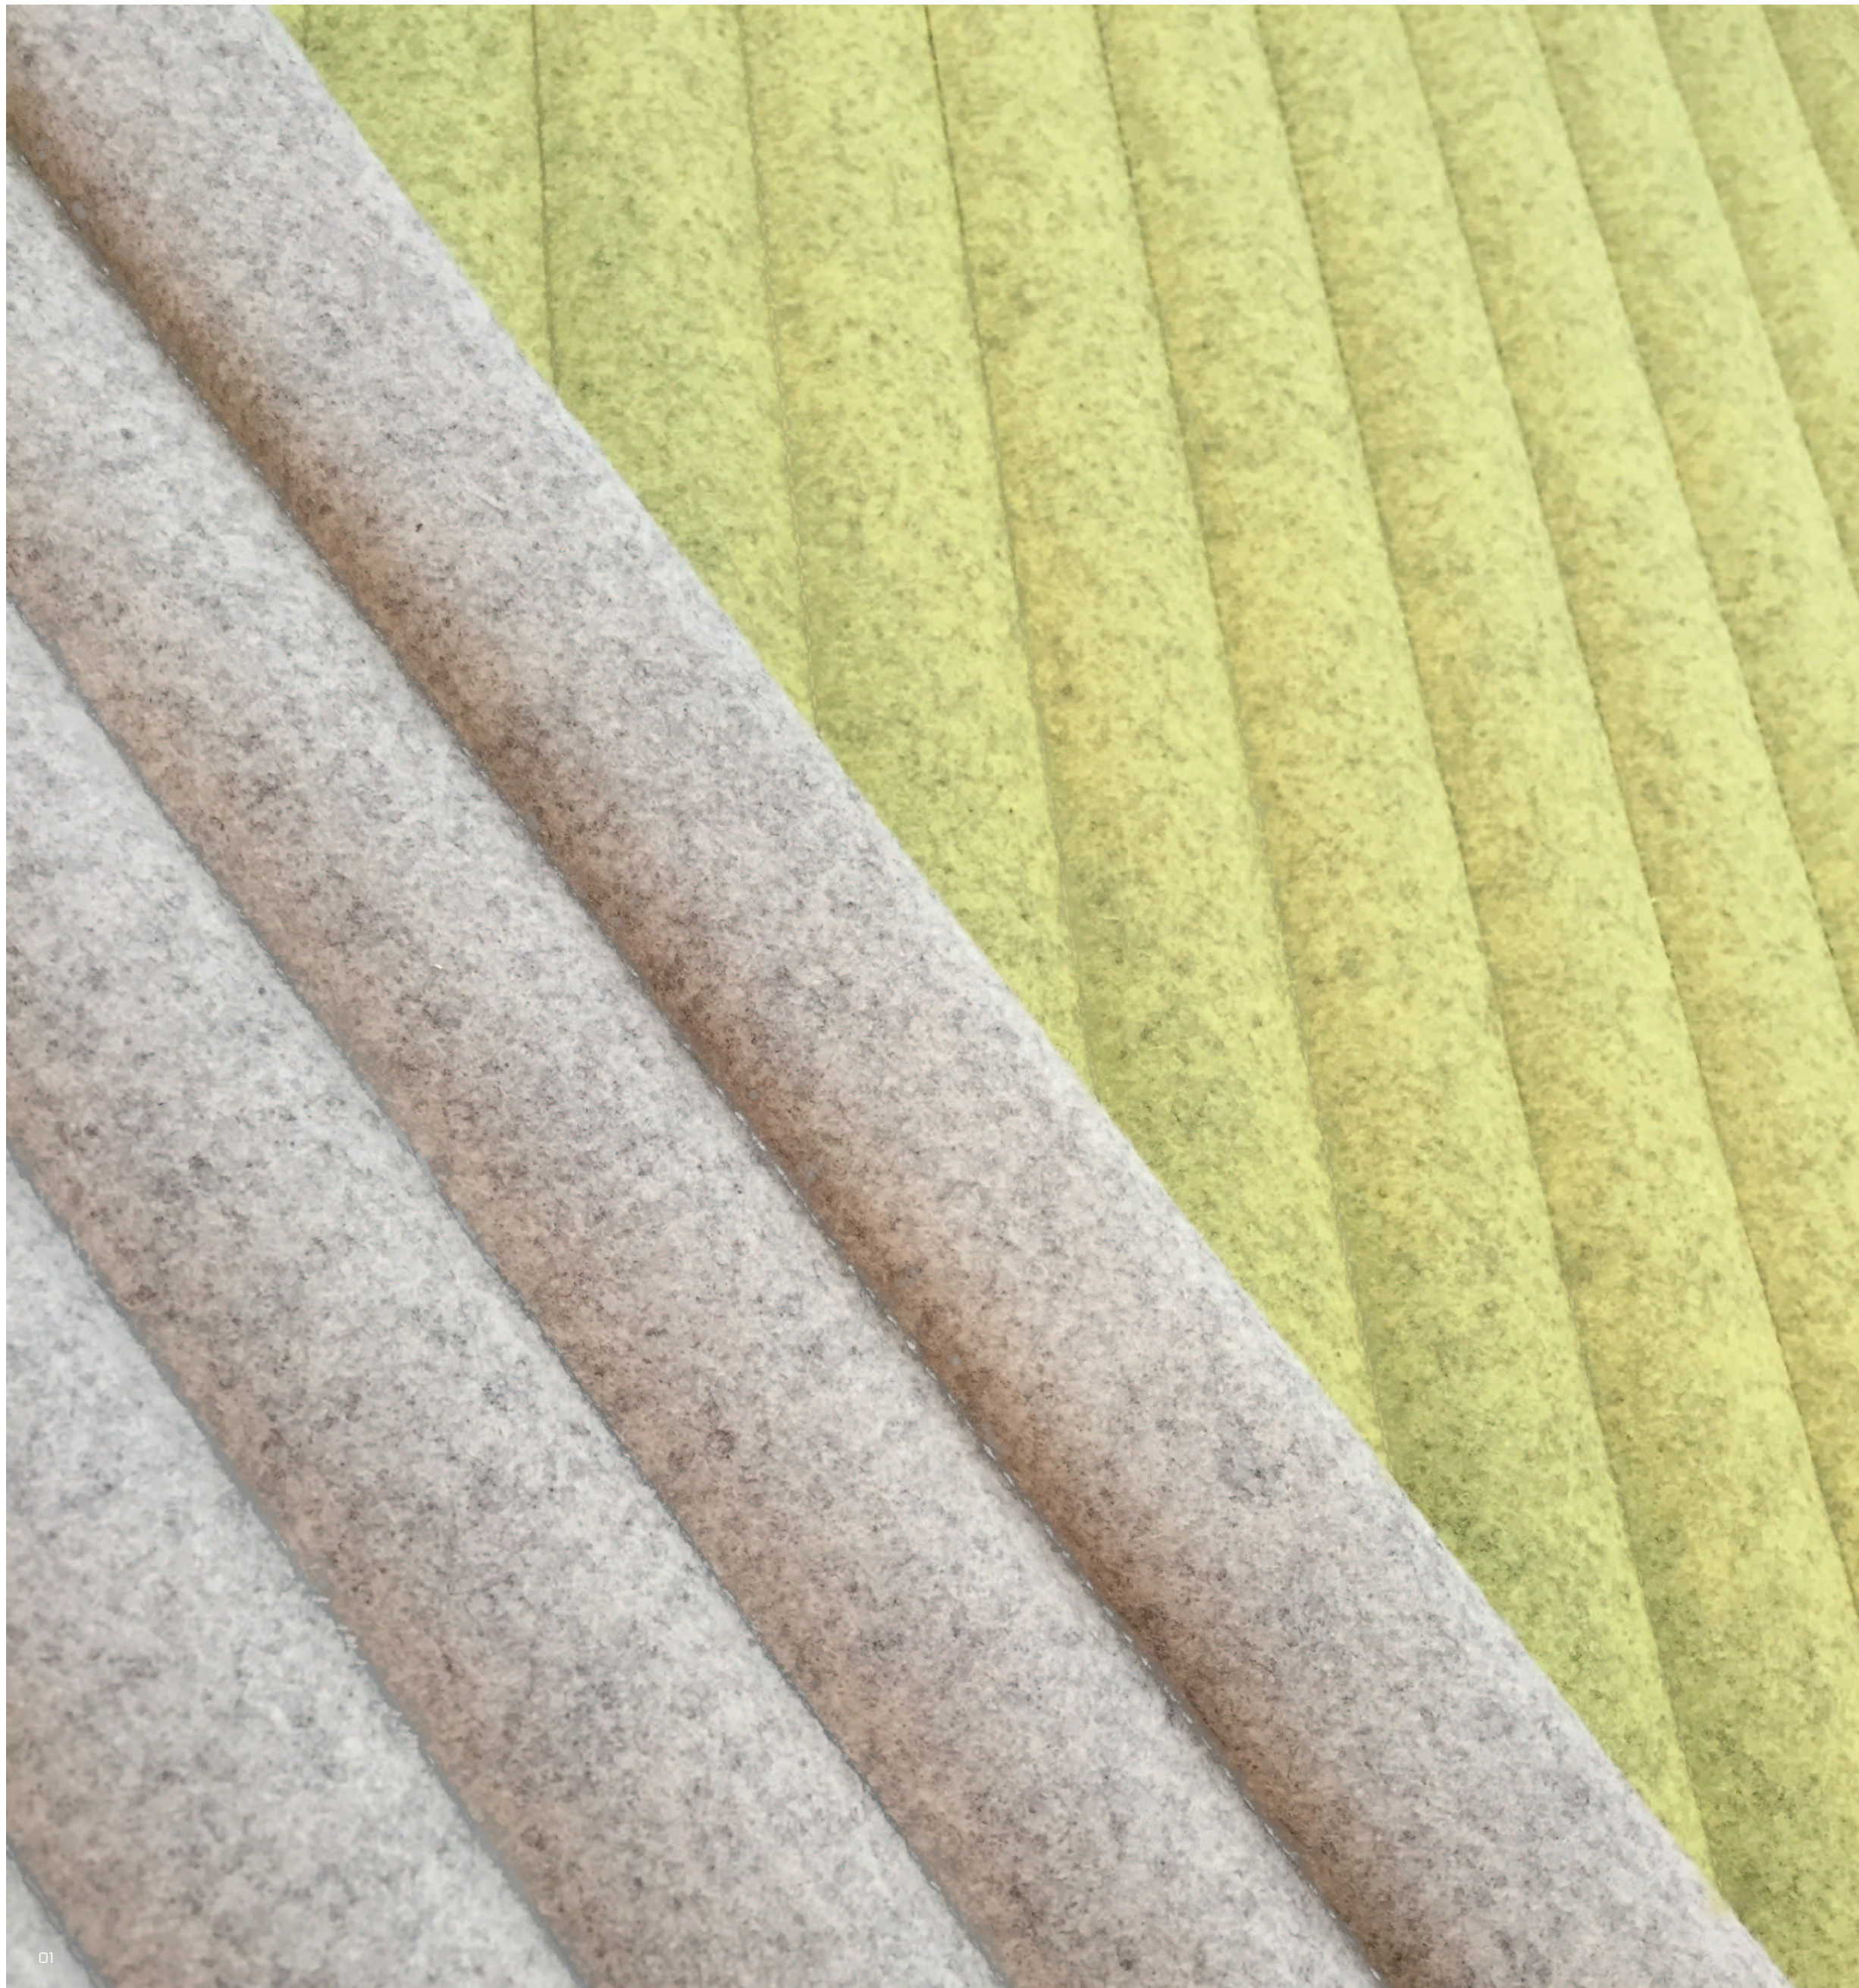

Following the launch of the Straight Ledge Table in September of 2017, Teknion is introducing a curved version. The Curved Ledge Table provides additional surface area and is optimized to support casual touchdown areas around the Zones modular sofa. With its 42-inch (107 cm) tall, and shallow 18-inch (46 cm) depth at bar height, the Curved Ledge Table is perfect for additional guests to perch or stand. Curved Ledge Table sizing matches all modules of the Modular Sofa. Electrics are accommodated through the use of under-mounted casual power bars, or user-edge USB modules.

01 Zones Quilted Fabric Buffers are a more texturized alternative to Flat Fabric Buffers.

02 The Long Workshop Table extends Zones' work table collection.

03 The Curved Ledge Table supports casual touchdown areas around Zones Modular Seating.

04 The Curved Ledge Table accommodates additional guests, and those who prefer to perch or stand.

altos landscape

Altos Landscape is a major enhancement to the Altos wall system that is horizontally planned with a functional collection of wall-integrated furniture. This unique combination gives opportunity for layered off-module planning applications that maximize the usable space in an environment, and minimize the necessary cost of architectural product on the floorplate.

Altos Landscape provides the same refined Altos aesthetic, and includes both height-adjustable and fixed-height desks, a task light, storage options, a shelving program and significantly enhanced acoustic fascia program with both soft and hard fascia materials.

Unlike conventional vertically oriented wall systems, Altos Landscape facilitates off-module planning along the horizontal datum. This increased flexibility in planning gives opportunity for the wall-integrated shelving, storage, lighting and desk offering to be optimized for the environment around it.

Altos Landscape fascias options include Solid Wood, Glass, Whiteboard, Fabric-Wrapped, Tackable Fabric, Acoustic Fabric, or Acoustic Metal. Fascias are flexible in their type and location, and can be reconfigured after installation, or swapped out with other fascia types without modifying the interior wall structure.

altos desk

Altos Desk is the first height-adjustable desk to market that integrates with a standard 4-inch (10 cm) wall. It offers flexibility as a single- and double-sided solution within the standard wall. The second desk can be easily added after installation of the single-sided desk due to a shared interior mechanism. The nature of this integrated design maximizes functional space within an environment, eliminates visible cables and promotes ergonomic practices within the workplace.

coordinated architectural interiors finish program

Teknion is now offering an expanded and coordinated finish program across the Altos, Optos and Focus architectural wall systems. The program, in which hardware and component finishes coordinate with eight standard paint finishes, provides a coherent aesthetic continuity when different walls are planned together, while aligning with current market trends.

Paint finishes are available at the same price point as the anodized finish, and with standard lead times.

01 Altos Landscape enables horizontal planning with a collection of wall-integrated furniture.

02 Altos Desk offers flexibility as a single- and double-sided option within the standard wall.

nuova contessa

Nuova Contessa is a redesigned and enhanced version of Teknion's popular Contessa synchro-tilt task chair. It honors the beautiful signature, sweeping line of Contessa's structural frame, while offering significantly upgraded seating functions and increased strength. The chair has been redesigned to meet current demands for uncompromised seating comfort for diverse body types.

key new features

Nuova Contessa offers users a broader assortment of options, including:

- Arm options include fully featured 4D arm with button-height control and fixed arm, both of which maintain the unique Smart Operation feature
- Optional height-adjustable lumbar element responds uniquely to an individual's back curve depth and force
- Dual-upholstered model with upholstered seat features an improved tri-durometer foam seat construction for ultra comfort
- Added flexibility of back, shell and seat frame provides additional comfort
- Mesh material features Nu-Tess Mesh in a zahedral braided format. It provides an updated look, optimized feel, additional support, and is specifically tailored for the back (and uniquely woven for additional support on the seat on the all-mesh version)
- Nu-Tess Mesh colors include Iron and Basalt plus newly added Banner, Brier and Lapis – all allowing coordination with Luum upholstery and other Teknion mesh-back chairs
- New contemporary Very White and Polished Aluminum frame and base finish option

standard features

Nuova Contessa offers many of Contessa's key standard features, including:

- Smart Operation
- Seat-depth adjustment
- Tilt-tension control
- Variable tilt lock
- Pneumatic seat-height adjustment

options

Nuova Contessa incorporates these Contessa options:

- Headrest
- Seat upholstery
- Current frame and base finishes – Ebony, Tess Silver and Ebony with Polished Aluminum
- Cylinder heights

01 New Nu-Tess Mesh is offered in Basalt and Iron, plus three new colors – Banner, Brier and Lapis.

02 Lumbar Element is now optional. Very White with Polished Aluminum frame is a new finish option.

03 New Nu-Tess Mesh provides an updated look, optimized feel and additional support.

around swivel stool

In today's workplace of varying work heights and postures, stools are becoming increasingly popular. The Around Swivel Stool complements the Around Swivel Task Chair, designed by Justus Kolberg and introduced by Teknion in 2017.

The Around Swivel Stool's seat height ranges from 20 3/4 to 28 3/4 inches (52.7 to 73 cm), making it

ideal for counter-height applications. It is available in both the Upholstered Back and Mesh Back models.

Both the Ebony frame and Gris frame finish versions have the upgraded, polished aluminum height-adjustable footring.
