

teknion hiSpace

teknion

In an age of acceleration, fast-paced and collaborative environments must be adopted by every organisation. It's essential for companies to foster a more people-centric workplace to maximise employees' wellbeing.

The hiSpace™ height-adjustable table is thoughtfully designed for the posture demands of each individual user. This dynamic height adjustable solution optimises the way users work, offering a fluid and interconnected work environment.

The hiSpace collection comes with many components, addressing the flexible needs to support various types of work ecosystem.

tuning to the best solution

start here:

determine a starting point

We understand that each organisation is unique, but there are general commonalities in terms of how they work and the type of work they support. Let's figure out the best solution by determining a starting point.

Select which is important for your organisation.

Function over aesthetic features?
 Basic

OR

Highly functional workplace with aesthetic features?
 High-End

OR

A balance of function and aesthetics?
 Balanced

adjust the functionality :

dial it to the left or right

Next, fine-tune the workstation against the functionality aspect.

Move to the LEFT box if:

- Your workers are mostly Nomadic Workers.
- They can work anywhere with their mobile devices and are often out of the office.

Move to the RIGHT box if:

- Your workers are mostly Resident Workers.
- They work with multi-screen, need high tech support such as UPS or special peripherals and are highly focused on their own task at the workstations.

*You might be back to the original box even after you dial it LEFT or RIGHT.

adjust the aesthetic :

dial it up or down

Finally, pick the right aesthetics or design detailing for your work setting.

Move a box UP if you focus on:

- Colours, design language and aesthetics.
- The finer detailing of furniture or objects.

Move a box DOWN if you focus on:

- Standardisation, conformity and process excellence.
- Professionalism, maturity, and corporate aesthetics.

*Aesthetics is subjective and are based on personal preference.

basic

A setting that is optimised for Nomadic users who are constantly on-the-go. Spending most of their time out of the office, this setting makes it easy to accomplish their everyday tasks in office. These nomadic workers can quickly plug in their devices on the top mount power outlet, place their bags on an open storage to easily access their documents and work tools for better productivity.

very functional

A setting that was designed specifically for practical and highly functional workstations. Thoughtful placement of power access, ample cabling options and enhanced work tools enable resident workers to be as productive as possible. Desk-bound by the nature of work and less mobile, a seamless and agile workstation ensures efficiency for these workers.

balanced

This setting is perfect for organisations that have both nomadic and resident workers. This resilient work space ecosystem is crucial to support individuals and teams to communicate, collaborate and contribute to active projects. Hidden power access is easily accessible for mobile workers while a mix of cabling solutions are available to ensure sufficient points are provided for the mid-technology users.

minimal yet functional

A minimalist setting that champions collaboration is essential in a highly collaborative organisation. It breaks down communication barriers by fostering efficiency and creativity where users are untethered to their dedicated table, giving them the ability to work within the office comfortably.

18

A workspace should be conducive to foster a mix of collaboration and productivity. With some refinements, the work environment can be set up and suited to address a company's need to grow, expand or recalibrate without fuss.

There are four types of power delivery options available. From shared capacity to high capacity, hiSpace offers it all.

no spine tray

This is used when power cables for the workstation can be shared from an adjacent workstation that has a spine tray. It is only possible if the power delivery does not need to be shared with subsequent workstations.

low capacity spine tray

This option is for low power cabling requirements, where wireless devices are mostly used and cables only pass through the spine tray.

medium capacity spine tray

This option is used where cabling to workstations is significant. Two or three circuits are attached to each workstation, in addition to the height adjustable power mechanism. This tray can accommodate limited power boxes and outlets besides cabling – suited for GB plug (British style), power boxes and outlets.

high capacity spine tray

This option comes with a significant increase in cable compared to the standard capacity spine tray. Attached with up to six circuits per workstation, it also has an increased accommodation of power boxes and outlets including all types of plugs in addition to GB style.
